

Cybersecurity Programs for

FEDERAL AGENCIES

Strengthen your Infrastructure. Reduce your risk.

Today's federal agencies face sophisticated and constantly evolving cyber threats, resulting in data breaches, disrupted services, compromised networks, and other outcomes that affect the safety of citizens. As the federal government's most trusted partner, we'll work with you to deliver holistic solutions that address your unique challenges and help you manage cyber risk.

WHAT WE DO

At Iron Vine, our team of cyber engineers and subject matter experts has a deep understanding of the federal government's unique challenges. We've worked across federal civilian agencies, from the Securities and Exchange Commission (SEC) to the Department of State, **delivering tailored cybersecurity programs on-time and on-budget.**

Cybersecurity Program Development

Build a robust security program, from policy, governance, and compliance to vulnerability management, network monitoring, and incident response

Security Engineering

Address your security engineering needs with services ranging from network design to secure IP phone system implementation and more

Cloud Infrastructure Security

Protect your cloud data while enabling your team to collaborate from anywhere, efficiently and securely

Forensics & Examinations

Find your blind spots and mitigate your risk with our advanced forensics analysis services

SOC Management

Improve your security posture and ensure compliance with industry-leading SOC management from our team of experts

Security Controls Testing

Verify that your current security processes and tools are working as effectively as possible

HOW YOU BENEFIT

- ✔ Measure and report on information security policy for federal compliance
- ✔ Identify and assess emerging threats to create a proactive, tailored plan
- ✔ Gain integrated, contextualized, industry-specific Cyber Threat Intelligence
- ✔ Seamlessly integrate new tools while optimizing your existing security posture
- ✔ Reduce costs through expert and efficient planning and execution
- ✔ Protect sensitive data such as patient information
